

## Job Description:

Functional testing ,api testing

## Generated Questions

No.	Questions
1	Can you describe your experience with functional testing and API testing? What types of projects have you worked on, and what tools did you use?
2	Explain the difference between functional testing and API testing. How do you approach each type of testing differently?
3	What strategies do you use to design effective test cases for functional testing? Can you provide an example of a challenging test case you've created?
4	How do you handle API testing when dealing with RESTful services? What tools or frameworks have you used for API testing?
5	Describe a situation where you encountered a difficult bug during functional testing. How did you isolate and resolve the issue?
6	What techniques do you use to ensure adequate test coverage in both functional and API testing scenarios?
7	How do you approach testing API authentication and authorization? What security considerations do you keep in mind?
8	Can you explain the concept of boundary value analysis and how you apply it in functional testing?
9	What methods do you use to test API performance and scalability? How do you identify potential bottlenecks?
10	How do you stay updated with the latest trends and best practices in functional and API testing? Can you share an example of how you've applied a new technique or tool in your work?
