

Job Description:

Functional testing ,api testing

Generated Questions

No.	Questions
1	Can you describe your experience with functional testing and API testing? What types of applications have you tested using these methods?
2	What are the key differences between functional testing and API testing? How do you approach each type of testing differently?
3	Explain the process you follow when designing test cases for API testing. What factors do you consider?
4	How do you handle authentication and authorization when testing APIs? Can you provide an example of a challenge you've faced in this area?
5	What tools have you used for functional and API testing? How do you choose the appropriate tool for a given project?
6	Can you walk me through your approach to test data management in functional testing? How do you ensure comprehensive test coverage?
7	Describe a situation where you encountered a particularly challenging bug during functional testing. How did you isolate and resolve the issue?
8	How do you ensure the reliability and repeatability of your API tests? What strategies do you employ for maintaining test scripts?
9	Can you explain the concept of contract testing in API testing? Have you implemented it in any of your projects?
10	How do you approach performance testing within the context of functional and API testing? What metrics do you typically focus on?
