

## Job Description:

API testing using rest assured

## Generated Questions

No.	Questions
1	Can you explain the main components of a REST API request and response?
2	How do you use RestAssured to send a GET request and validate the response status code?
3	Describe the difference between JSON and XML in the context of API testing. How would you handle both formats using RestAssured?
4	What are some best practices for organizing and structuring API tests using RestAssured?
5	How would you handle authentication in your API tests using RestAssured? Can you provide an example?
6	Explain how you would use RestAssured to test a POST request that creates a new resource. What assertions would you include?
7	How do you handle and validate error responses in your API tests using RestAssured?
8	Can you describe a challenging API testing scenario you've encountered and how you resolved it?
9	How would you approach performance testing of APIs using RestAssured or other tools?
10	What strategies do you use for maintaining and updating API tests when the API undergoes changes or versioning?
