

## Job Description:

Functional testing ,api testing

## Generated Questions

No.	Questions
1	Can you describe your experience with functional testing and API testing? What types of projects have you worked on, and what tools did you use?
2	Explain the difference between functional testing and API testing. How do you approach each type of testing differently?
3	What strategies do you use to design effective test cases for functional testing? Can you provide an example of a challenging test case you've created?
4	How do you handle API testing when dealing with complex request/response structures? What tools or libraries do you prefer for API testing?
5	Describe a situation where you encountered a difficult-to-reproduce bug during functional testing. How did you approach isolating and resolving the issue?
6	What methods do you use to ensure comprehensive test coverage in both functional and API testing? How do you prioritize test cases?
7	Can you explain the concept of boundary value analysis and equivalence partitioning? How would you apply these techniques in a real-world testing scenario?
8	How do you approach testing RESTful APIs? What key aspects do you focus on, and what common issues do you look out for?
9	Describe your experience with test automation for functional and API testing. What frameworks or tools have you used, and what were the benefits and challenges?
10	How do you stay updated with the latest trends and best practices in functional and API testing? Can you share an example of how you've applied a new technique or tool in your work?
