

Job Description:

testNG framework

Generated Questions

No.	Questions
1	Can you explain the key features and advantages of TestNG over other testing frameworks like JUnit?
2	How do you configure test groups in TestNG? Provide an example of when and why you would use them.
3	Describe the TestNG annotations you commonly use and their purposes. How do they differ from JUnit annotations?
4	How would you implement data-driven testing using TestNG? Please provide a code example.
5	Explain the concept of test dependencies in TestNG. How do you handle them in your test suites?
6	How do you integrate TestNG with Selenium WebDriver for web application testing? Describe your approach and best practices.
7	Can you walk me through the process of creating and running parallel tests using TestNG? What are the benefits and potential challenges?
8	How do you handle test failures and retries in TestNG? Provide examples of when you've implemented this in a project.
9	Describe your experience with TestNG listeners. How have you used them to enhance your test automation framework?
10	How do you approach writing maintainable and scalable test code using TestNG? Share some best practices you've developed over time.
