

## Job Description:

testNG framework

## Generated Questions

No.	Questions
1	Can you explain the key features and advantages of TestNG over JUnit?
2	How do you configure test groups in TestNG? Provide an example of when you might use them.
3	Describe the TestNG annotations you're familiar with and their purposes. How do they differ from JUnit annotations?
4	How would you implement data-driven testing using TestNG? Can you provide an example?
5	Explain the concept of test dependencies in TestNG. How have you used them in your projects?
6	How do you handle parallel execution of tests in TestNG? What are the potential challenges and how do you address them?
7	Can you describe how you've integrated TestNG with Selenium WebDriver for web application testing?
8	What strategies do you use for test report generation in TestNG? Have you used any third-party reporting tools?
9	How do you manage test configurations and parameters in TestNG? Can you provide examples from your experience?
10	Describe a complex testing scenario you've implemented using TestNG. What challenges did you face and how did you overcome them?
