

Job Description:

Functional testing ,api testing

Generated Questions

No.	Questions
1	Can you describe your experience with functional testing and API testing? What types of projects have you worked on, and what testing methodologies did you use?
2	Explain the difference between functional testing and API testing. How do you approach each type of testing differently?
3	What tools and frameworks have you used for API testing? Can you provide an example of how you've used one of these tools in a recent project?
4	Describe a challenging bug you encountered during functional testing. How did you isolate the issue, and what steps did you take to resolve it?
5	How do you ensure test coverage when performing functional testing on a complex application? What strategies do you use to prioritize test cases?
6	Can you walk me through your process for creating and maintaining test documentation, including test plans and test cases?
7	What techniques do you use for test data management in functional and API testing? How do you handle sensitive data in your test environments?
8	Explain how you would test RESTful API endpoints. What specific checks would you perform, and how would you validate the responses?
9	Have you worked with automated testing for APIs or functional testing? If so, what tools did you use, and how did you integrate automation into your testing process?
10	Describe a situation where you had to collaborate with developers to resolve a complex issue discovered during testing. How did you communicate the problem and work towards a solution?
