

Job Description:

Functional testing

Generated Questions

No.	Questions
1	Can you explain the difference between functional testing and non-functional testing? Provide examples of each.
2	Describe your experience with test case design techniques such as boundary value analysis and equivalence partitioning. How have you applied these in your previous projects?
3	What test management tools have you used in your career? How do you use them to organize and track test cases?
4	Explain the concept of regression testing and how you would approach it in a large-scale software project.
5	Can you walk me through your process for creating a test plan for a new feature in a web application?
6	How do you prioritize test cases when you have limited time for testing before a release?
7	Describe a challenging bug you encountered during functional testing. How did you isolate and report it?
8	What strategies do you use to ensure good test coverage in functional testing?
9	How do you approach testing for cross-browser compatibility in web applications?
10	Can you explain the concept of smoke testing and when you would typically perform it in the software development lifecycle?
