

Job Description:

testNG framework

Generated Questions

No.	Questions
1	Can you explain the key features and advantages of TestNG over JUnit?
2	How would you implement parallel test execution in TestNG? Provide an example of how you would configure it in your testng.xml file.
3	Describe the TestNG annotations you commonly use and their purposes. How do they differ from JUnit annotations?
4	Can you walk me through the process of creating and running a data-driven test using TestNG's @DataProvider annotation?
5	How would you handle test dependencies in TestNG? Provide an example scenario where you've used test dependencies in a project.
6	Explain the concept of test groups in TestNG. How would you use them to organize and execute specific sets of tests?
7	Can you describe a situation where you've used TestNG listeners in a project? What was the purpose, and how did you implement it?
8	How would you integrate TestNG with a Continuous Integration/Continuous Deployment (CI/CD) pipeline? What considerations would you keep in mind?
9	Describe your approach to creating a robust test automation framework using TestNG. What design patterns or best practices would you incorporate?
10	Can you explain how you would use TestNG for API testing? What additional libraries or tools would you combine with TestNG for this purpose?
