Job Description:

Functional testing

Generated Questions

No.	Questions
1	Can you explain the difference between functional testing and non-functional testing? Provide examples of each.
2	Describe your experience with test case design techniques such as boundary value analysis and equivalence partitioning. How have you applied these in your previous projects?
3	What strategies do you use to prioritize test cases when time is limited? Can you provide an example from your past experience?
4	How do you approach testing a new feature that has complex integrations with existing systems?
5	Can you walk me through your process for creating a test plan for a web application?
6	What tools or frameworks have you used for functional testing? Describe a situation where you had to choose between different testing tools and explain your decision-making process.
7	How do you handle regression testing in an agile environment? What techniques or tools do you use to ensure efficient regression testing?
8	Describe a challenging bug you encountered during functional testing. How did you isolate the issue, and what steps did you take to ensure it was properly fixed?
9	In your experience, how do you collaborate with developers and other team members to improve the overall quality of the software?
10	Can you explain the concept of test coverage and how you measure it in your projects? What strategies do you use to improve test coverage?
