Job Description:

Functional testing

Generated Questions

No.	Questions
1	Can you explain the difference between functional testing and non-functional testing? Provide examples of each.
2	Describe your experience with test case design techniques such as boundary value analysis and equivalence partitioning. How have you applied these in your previous projects?
3	What tools and frameworks have you used for functional testing? Discuss the pros and cons of one you're particularly familiar with.
4	How do you approach testing a new feature or functionality? Walk me through your process from requirements gathering to test execution.
5	Can you explain the concept of regression testing? How would you prioritize regression test cases in a time-constrained environment?
6	Describe a challenging bug you encountered during functional testing. How did you isolate and report it, and what was the resolution process?
7	How do you ensure test coverage is adequate for a given feature or application? What metrics or techniques do you use?
8	Explain the importance of test data in functional testing. How do you manage and maintain test data for different test scenarios?
9	Have you worked with automated functional testing? If so, describe your experience and the tools you've used. If not, how would you approach learning and implementing it?
10	In a scenario where you find a critical bug just before a release, how would you communicate this to stakeholders and what steps would you take to address it?
