Job Description:

playwright with java

Generated Questions

No.	Questions
1	Can you explain the key features of Playwright and how it differs from other automation frameworks like Selenium?
2	Describe your experience with implementing Page Object Model in Playwright with Java. How does it improve test maintenance?
3	How would you handle dynamic web elements and AJAX calls in Playwright tests? Provide an example scenario.
4	Explain the concept of selectors in Playwright. What are the different types of selectors you've used, and which ones do you prefer for robust test automation?
5	How do you manage test data in your Playwright framework? Discuss any strategies or tools you've used for data-driven testing.
6	Describe a challenging automation scenario you've encountered using Playwright with Java. How did you overcome it?
7	How do you ensure cross-browser compatibility in your Playwright tests? Discuss any specific considerations for different browsers.
8	Explain how you would set up parallel test execution in a Playwright with Java framework. What are the benefits and potential challenges?
9	How do you handle iframes and shadow DOM elements in Playwright? Provide code examples for interacting with these elements.
10	Discuss your approach to implementing API testing alongside UI testing in a Playwright framework. How do you integrate these different types of tests?
