Job Description:

testNG framework

Generated Questions

No.	Questions
1	Can you explain the key features and advantages of TestNG over other testing frameworks?
2	How do you configure test groups in TestNG? Provide an example of when you might use test groups in a real-world scenario.
3	Describe the TestNG annotations you're familiar with and their purposes. How do they differ from JUnit annotations?
4	How would you implement data-driven testing using TestNG? Can you walk me through the process and any relevant annotations?
5	Explain the concept of parallel execution in TestNG. How would you set it up, and what are some potential challenges?
6	Can you describe a situation where you used TestNG listeners? What was the purpose, and how did you implement them?
7	How do you handle dependencies between test methods in TestNG? Provide an example of when this might be necessary.
8	What strategies do you use for test reporting in TestNG? Have you integrated any external reporting tools?
9	How would you approach writing a custom assertion in TestNG? Can you provide a simple example?
10	Describe your experience with integrating TestNG into a continuous integration/continuous deployment (CI/CD) pipeline. What challenges did you face, and how did you overcome them?
