Job Description:

Functional testing ,api testing

Generated Questions

No.	Questions
1	Can you explain the difference between functional testing and API testing, and provide examples of when you would use each?
2	Describe your experience with API testing tools such as Postman or SoapUI. What are some key features you find most useful?
3	How do you approach writing test cases for functional testing? Can you walk me through your process?
4	What strategies do you use to ensure comprehensive test coverage when performing API testing?
5	Can you explain the concept of test automation and how it relates to functional and API testing? Have you implemented any automation in your previous work?
6	How do you handle testing for different HTTP methods (GET, POST, PUT, DELETE) in API testing? Can you provide an example of a test scenario for each?
7	What are some common challenges you've encountered in functional testing, and how did you overcome them?
8	Can you describe a situation where you had to debug a complex API issue? What steps did you take to identify and resolve the problem?
9	How do you approach testing API security? What are some key areas you focus on?
10	Can you explain the importance of boundary value analysis in functional testing and provide an example of how you've applied it in your work?
